

Curriculum Vitae

Monioudom Mao

Systems, Inventory, and Operations Data Intern

(Phone) +855 969398645

(Email) moniodommao@gmail.com

(Address) Kilo Lek 6 st, Russey Key, PP

Profile

Oudom is a Computer Science student specializing in Data Science with hands-on experience in academic projects involving Python, Excel, SQL, NoSQL databases, data visualization, database design, and data processing. He is seeking an Internship to apply his skills to real-world projects and data-driven solutions.

Education

Cambodia Academy of Digital Technology (2024 - present)

Bachelor of Computer Science, specializing in Data Science | GPA: 3.65

Academic Projects

Machine Learning for Smarter Inventory Management System

- Developed and applied Machine Learning models using LightGBM to forecast product demand, improving inventory management
- Implemented TensorFlow Recommenders with Deep Matrix Factorization (DMF) to analyze user interactions and deliver personalized product recommendations.

Recommendation Engine System - Data Engineering project

- Developed a collaborative filtering recommendation system using PySpark, processing large-scale user interaction data through a batch processing pipeline.

Hospital Management System - Database project

- Designed and implemented a relational database system for hospital operations including patients, doctors, appointments, medical records, prescriptions, inventory, and billing.
- Developed advanced SQL functionalities including stored procedures, triggers, indexes, and views to automate operations, improve query performance, and maintain data integrity.

ATM Simulation using - Python project

- Developed a graphical user interface ATM simulation handling withdrawals, deposits, and balance management.
- Implemented data processing and basic analysis of transaction datasets to support financial insights.

Achievement

Research Paper at ACET Conference *(13th - 14th Nov 2025)*

Co-authored and presented on Study performance optimization techniques for Augmented Reality application run on low-end devices, evaluate application efficiency and identify key factors affecting performance.

Skills

Technical Skills

- Programming: Python (pandas, numpy, etc.)
- Data: SQL, NoSQL, Excel

Soft skills

- Team collaborative & Communication
 - Adaptability & Quick Learning
 - Problem Solving & Critical Thinking
 - Time Management & Organization
-

Languages

Khmer (Native)

English (Intermediate)
